MAKERS OF FINE STONE GARDEN ACCENTS

## SET UP INSTRUCTIONS

### 3788 - THREE TIER GRANDESSA FOUNTAIN

Open bag containing the pump kit **P46015**. In the kit you will find:

- |                                      |                    |                      |
|--------------------------------------|--------------------|----------------------|
| 1 - 40460 (460 gallon per hour pump) | 1 - hose clamp     | 1 - tube of silicone |
| 1 - 3/4" clear tubing 70" long       | 1 - rubber stopper |                      |

1. Place the pedestal on a firm and level surface where fountain will remain and level. To level pedestal, place level on the top of the pedestal and level in all directions. Place the largest shell on the ground near the pedestal.
2. Find the pump and place the pump in the pump house located in the center of the large shell. Run the plug end of the power cord down PVC insert located in the pump house. Retrieve the power cord from under shell. Run the plug end of the power cord down the hole that is through the pedestal. Retrieve the power cord from under pedestal and place in the groove in the bottom of the pedestal. Place the largest shell on the pedestal. While placing the shell on the pedestal carefully pull the remainder of the power cord until all is hidden inside the fountain.
3. Find the tube of silicone and the rubber stopper. Fill the hole in the rubber stopper with silicone. Slip the rubber stopper onto the power cord about 12" from pump. Apply silicone around the outside edge of the rubber stopper and around the inside of the PVC insert in the pump house. Insert the rubber stopper snugly into the PVC insert. Apply more silicone on top and around the top edge of the rubber stopper. Don't skimp on the silicone you want a water tight seal.
4. Position the largest shell on pedestal and level in all directions. Shim as needed.
5. Find the 3/4" clear tubing 70" long and the hose clamp. Attach the piece of 3/4" clear tubing 70" long onto the outlet of the pump with the hose clamp.
6. Find the larger spacer and run the 3/4" clear tubing up through the center hole in spacer. Position the spacer on top of pump house in center of shell and level in all directions.
7. Find the second shell and run the 3/4" clear tubing up thru the hole in the center housing of the shell. Position the shell on top of the spacer and level in all directions
8. Find the third shell and run the 3/4" clear tubing up thru the hole in the center housing of the shell. Position the shell on top of the second shell and level in all directions.
9. Find the finial and remove any excess concrete or tape from inside and both ends of the PVC pipe located in the center of the finial. Before placing the finial on the fountain, Cut the 3/4" clear tubing 12" above the top surface of the center housing on the third shell. Slide finial onto the 3/4" clear tubing and position the finial on top of fountain.
10. Find the drain plugs and insert snugly into the drain inserts located in the three fountain shells. Remove any tape and or dirt from the drain insert before you insert the drain plug.
11. Fill shells with tap water and plug the pump into a 110VAC GFCI protected outlet. Adjust the water flow to the finial using the dial type flow control located on the front of the pump until the desired result is achieved.
